Phase 1: Requirement Analysis & Planning

Objective

The main objective of this phase is to understand the requirements of the SwiftShip Tracker system and plan the Salesforce implementation.

Customers may face difficulty while booking and tracking parcels when they need to depend on support or multiple applications. The proposed system provides a centralized platform where parcel information can be managed and tracking assistance can be provided through AgentForce AI.

Key Activities

- Collect requirements from customers and delivery agents.
- Identify the major users of the system such as Customer, Agent and Admin.
- Define the scope and objectives of the project.

- Identify parcel booking, tracking and delivery update requirements.
- Design the data model using Parcel, Sender, Receiver and Delivery objects.
- Identify the Salesforce tools required for development.
- Plan automation using Salesforce Flows.
- Plan AI-based assistance using AgentForce AI and Prompt Builder.
- Define security requirements using profiles and permission sets.

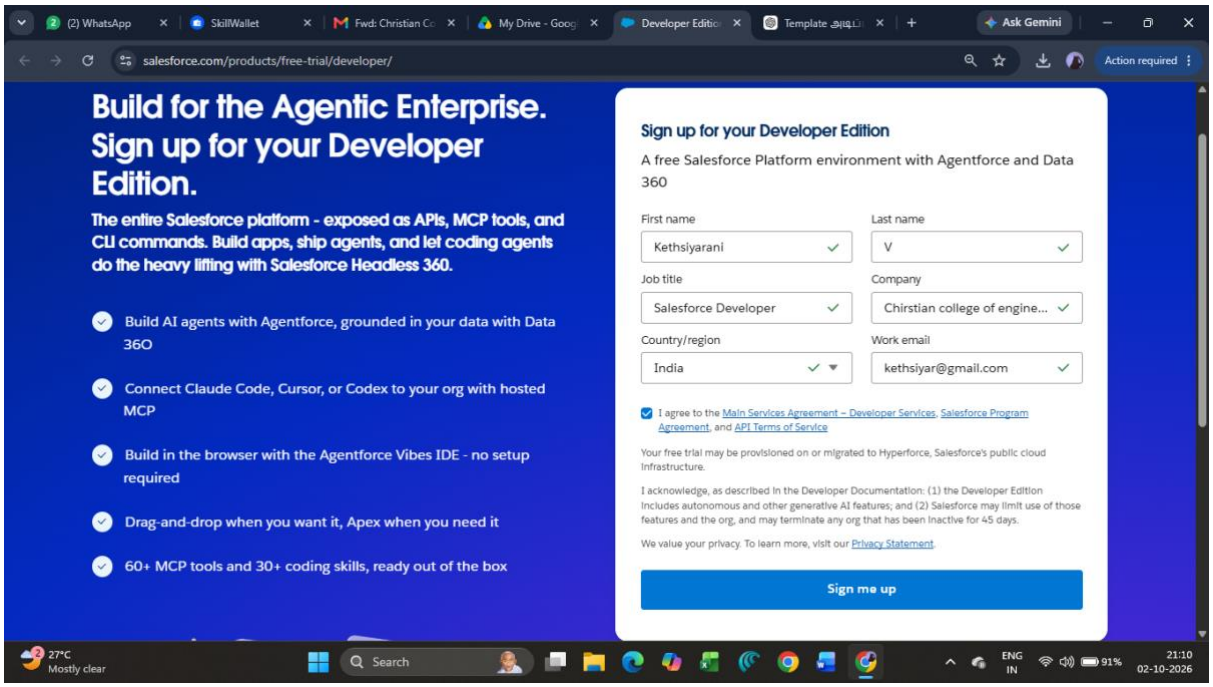

Phase 2: Salesforce Development – Backend & Configurations

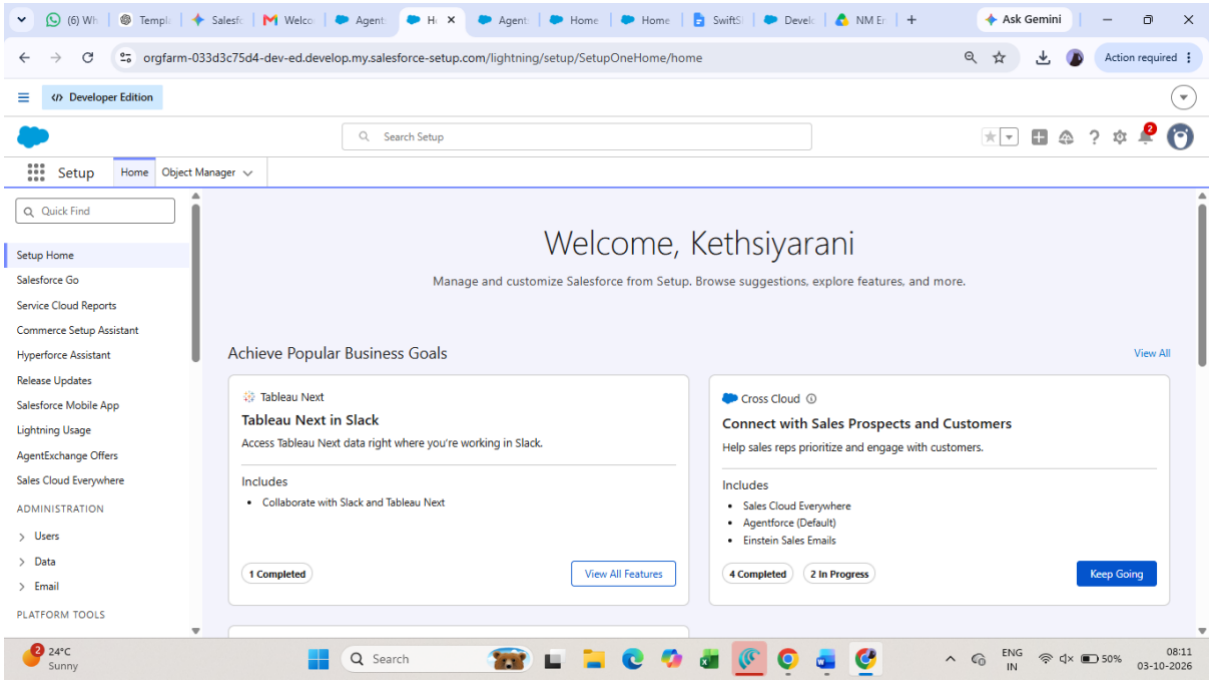

This phase focuses on developing the backend structure and configuring the Salesforce environment.

Key Activities

- Create the Salesforce Developer environment.
- Create the required custom objects such as Parcel, Delivery, Sender and Receiver.
- Create relationships between the objects.
- Create Salesforce tabs for the project modules.
- Create Salesforce Flows for automation.
- Configure Prompt Builder for parcel-related information retrieval.
- Configure the required backend components for parcel management.

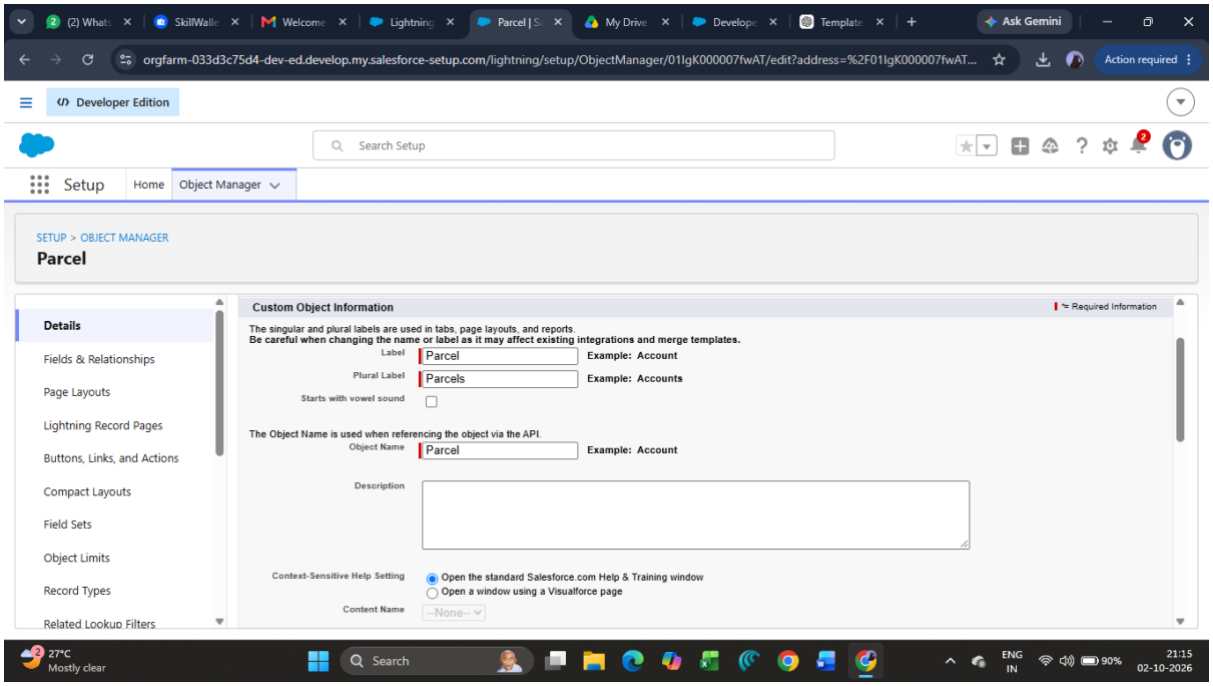

Milestone 1 – Salesforce Account

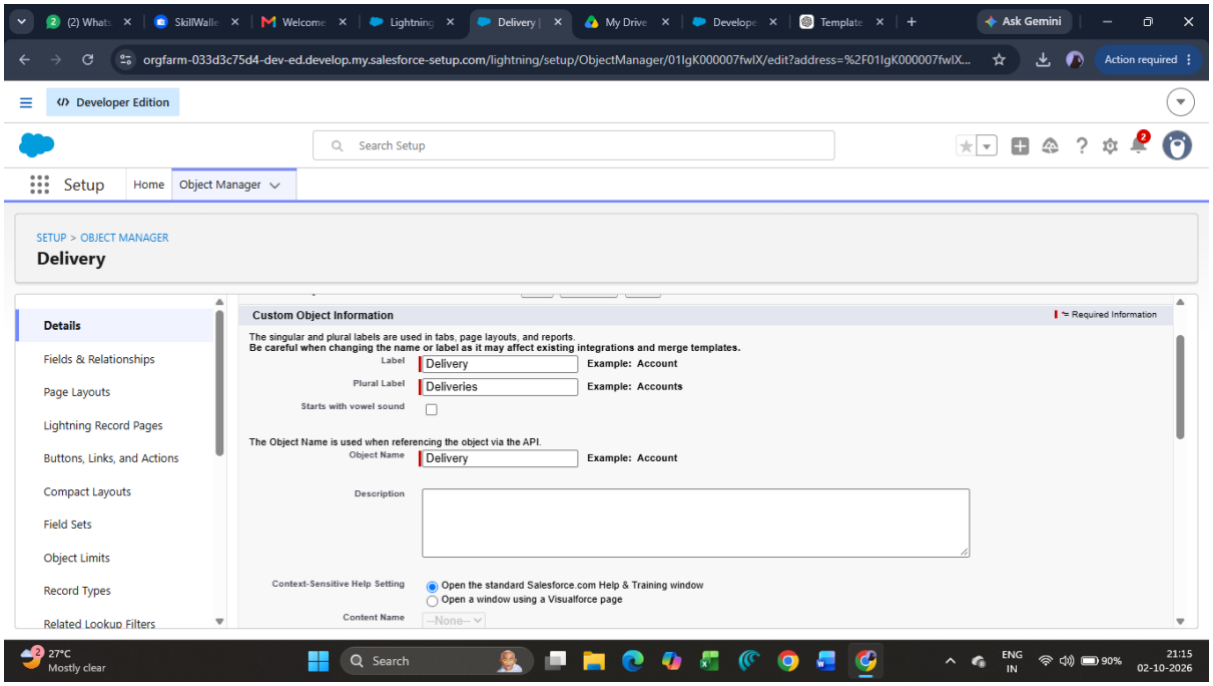

Milestone 2 – Object creation

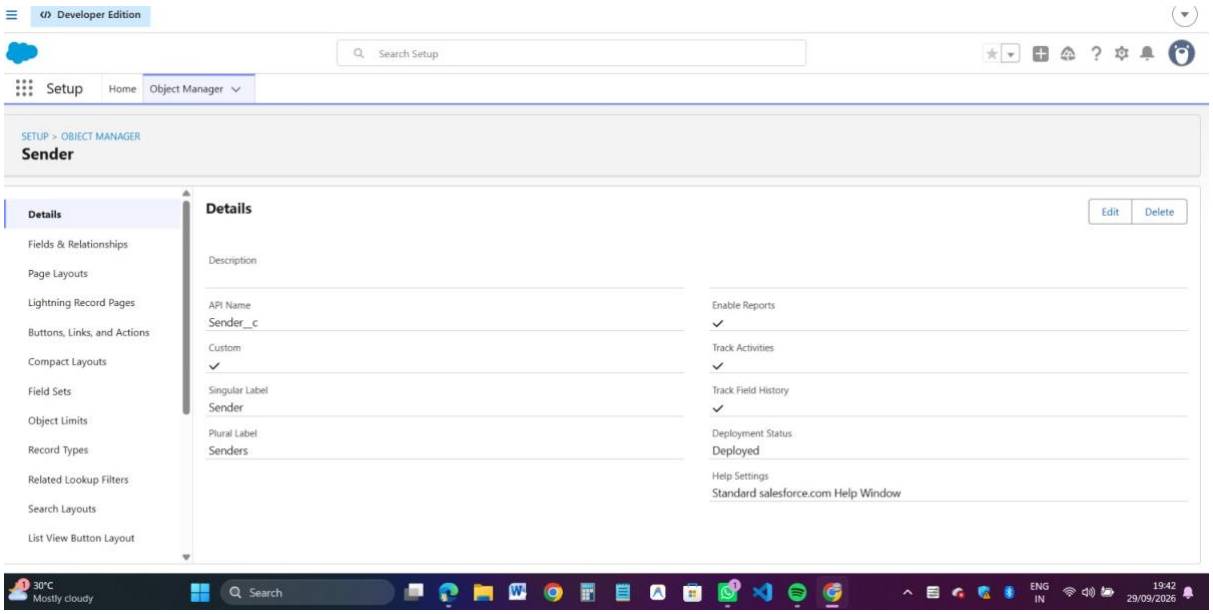

Creating parcel object:

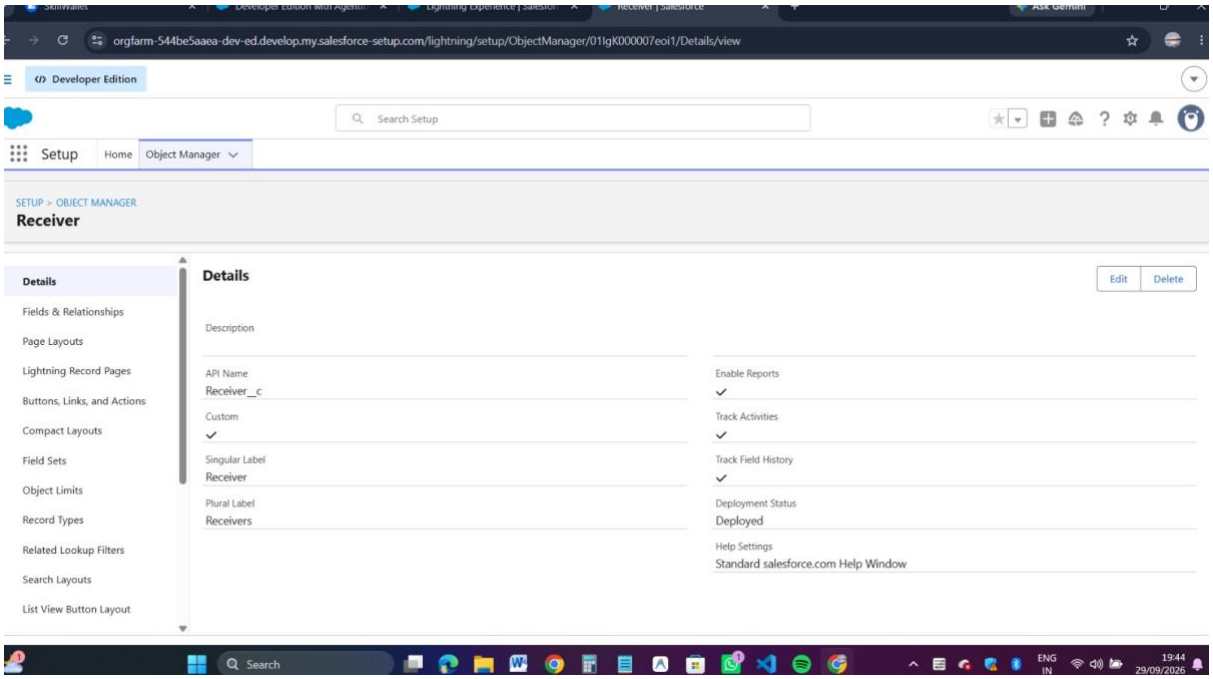

Creating delivery object:

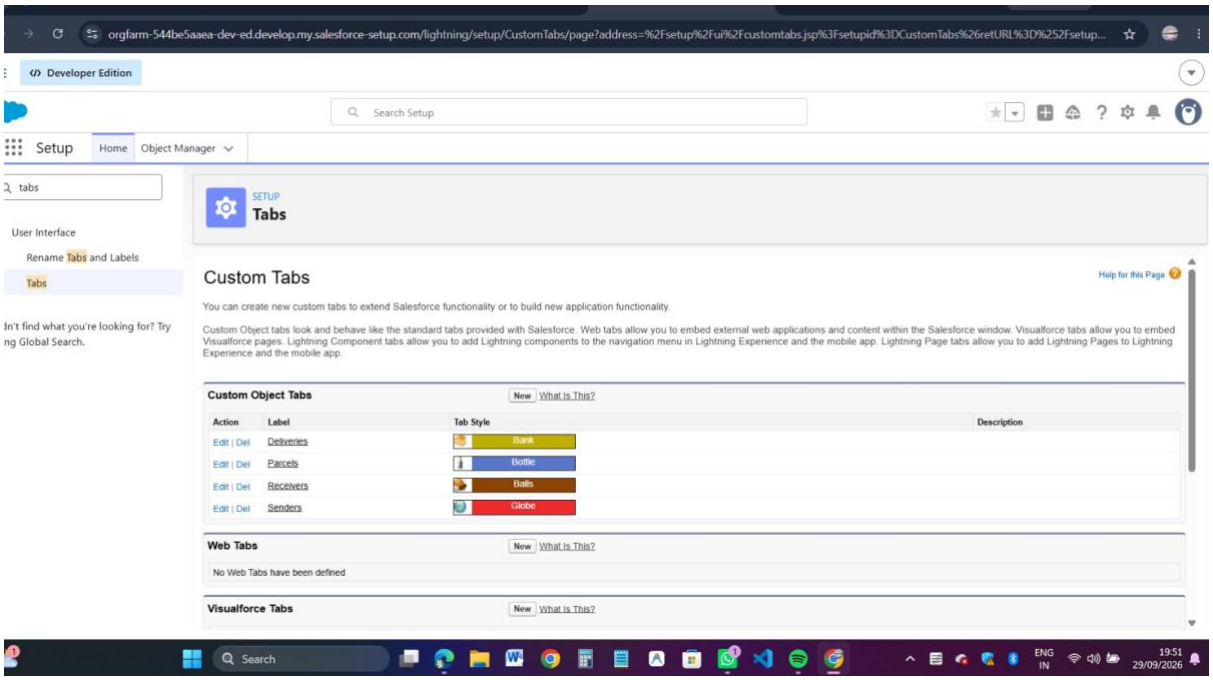

Creating sender object:

Creating receiver object:

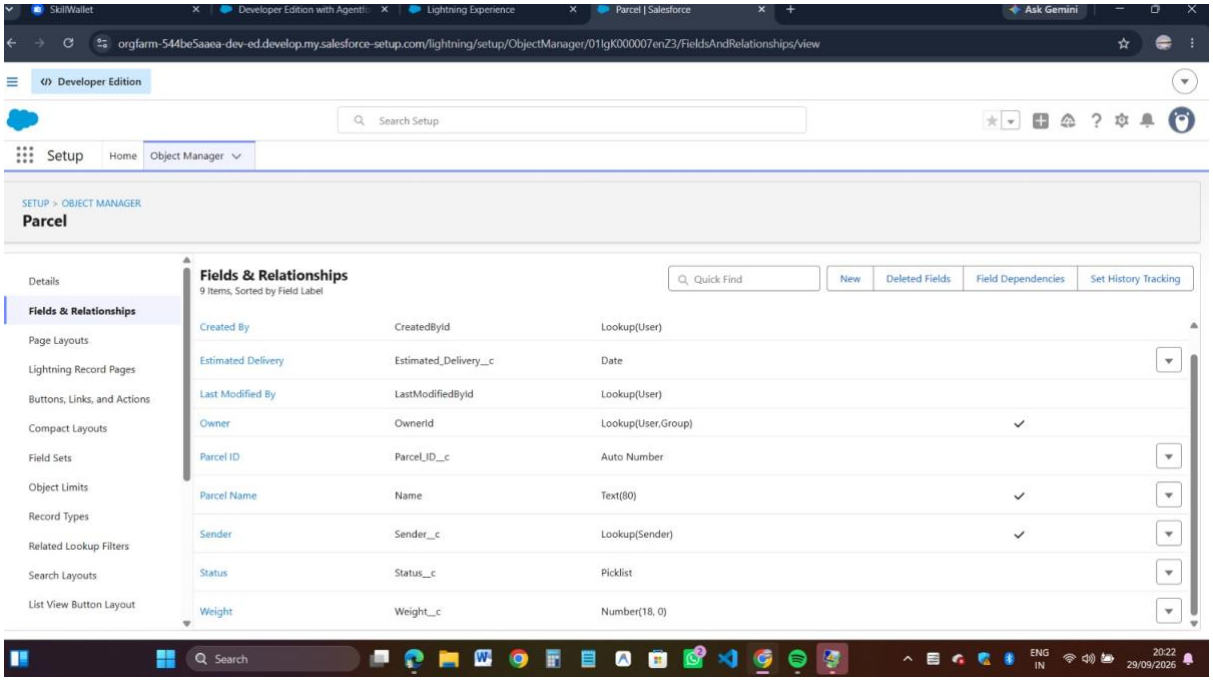

Milestone 3 – Tabs

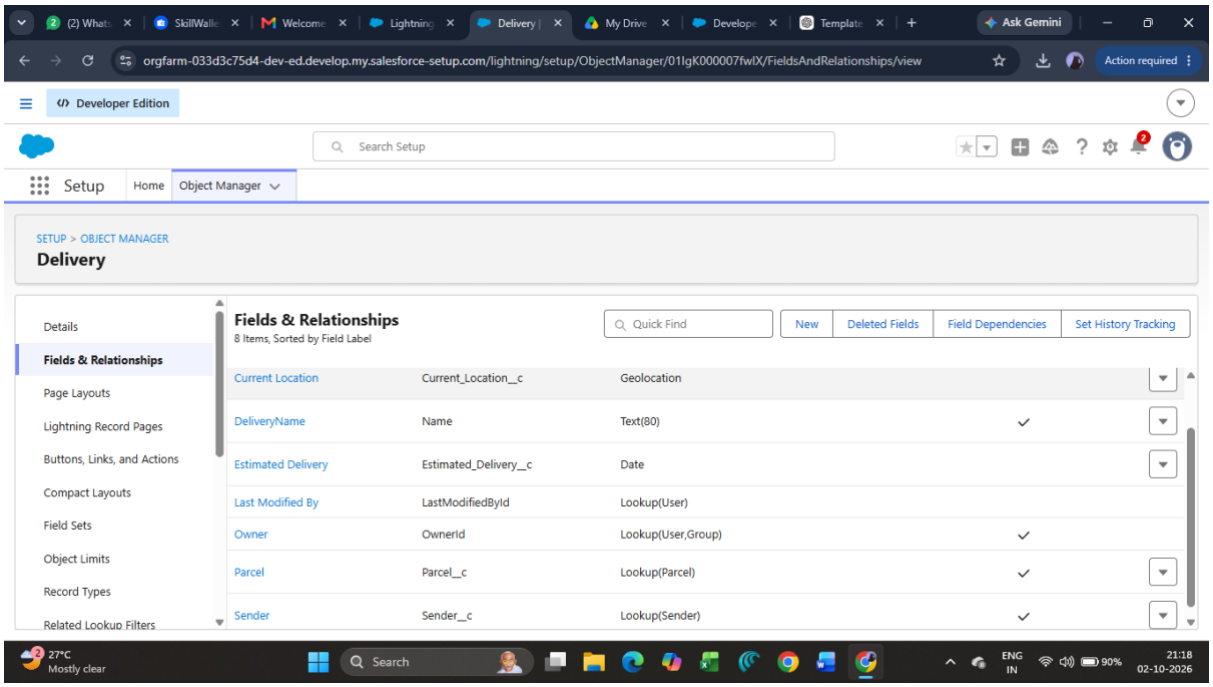

Milestone 4 – Fields & Relationships

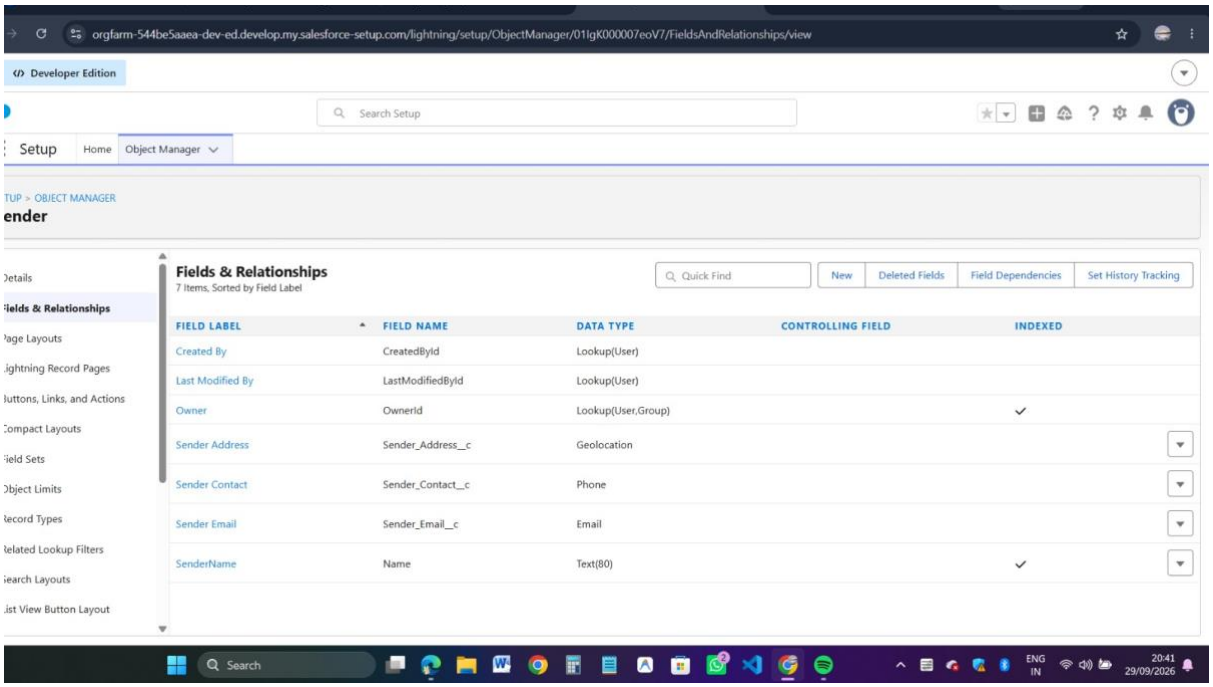

Parcel object:

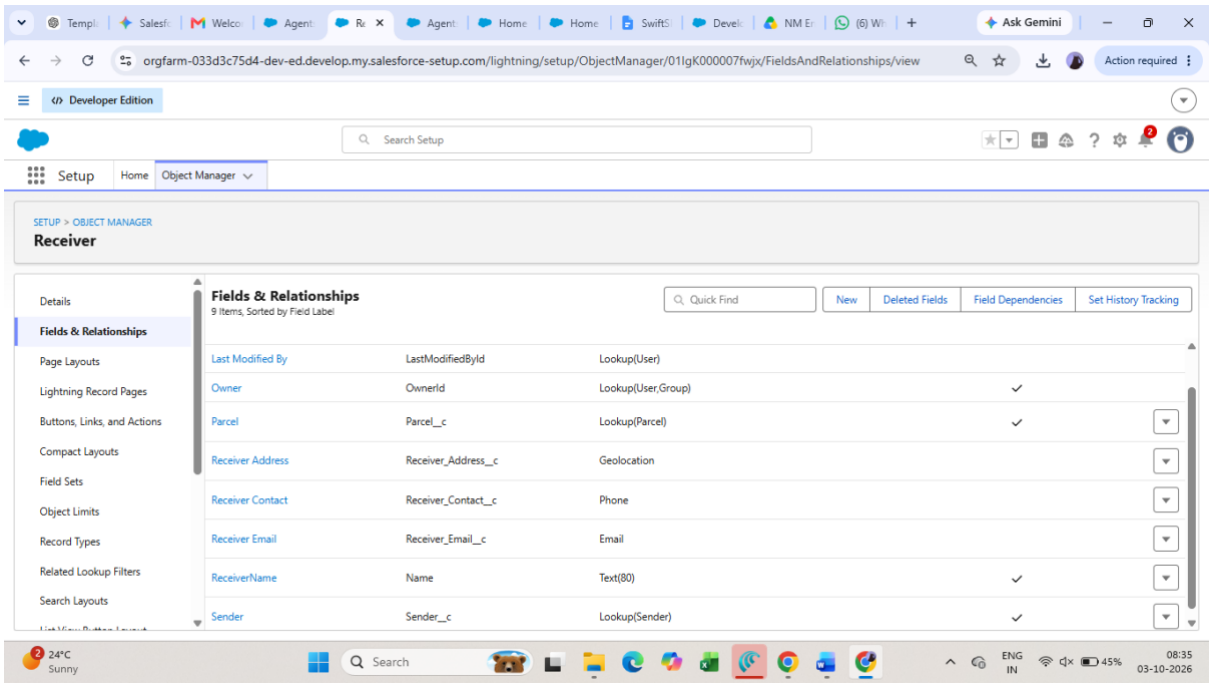

Delivery object:

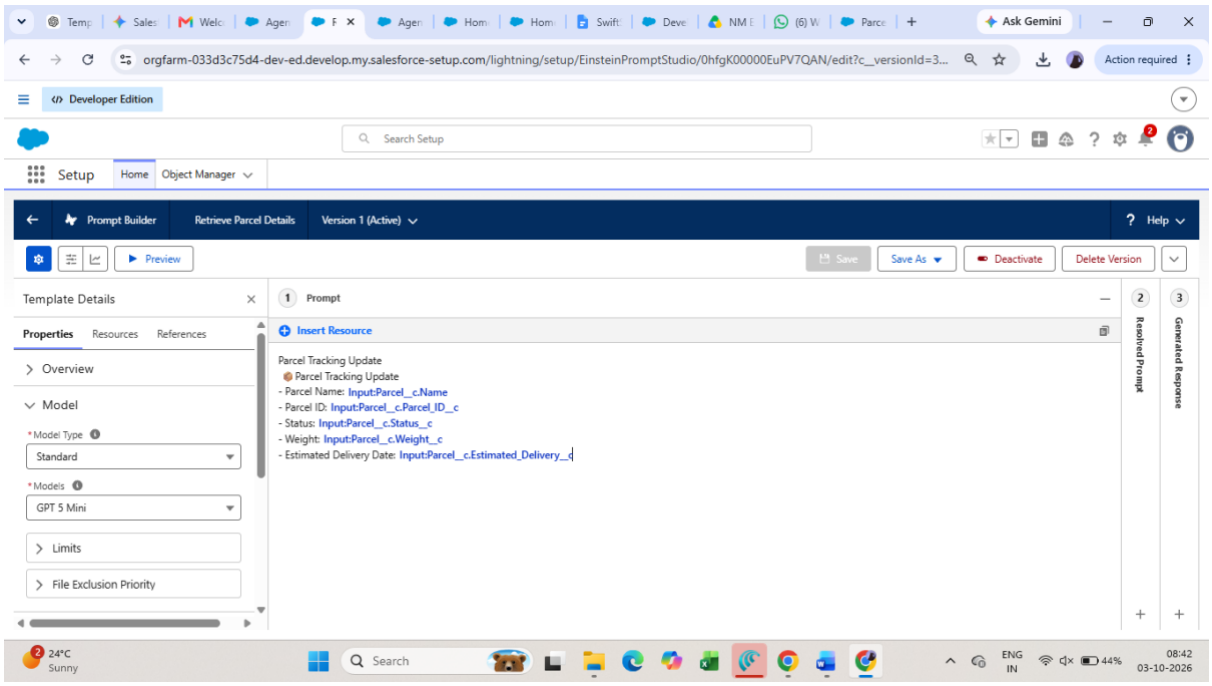

Sender object:

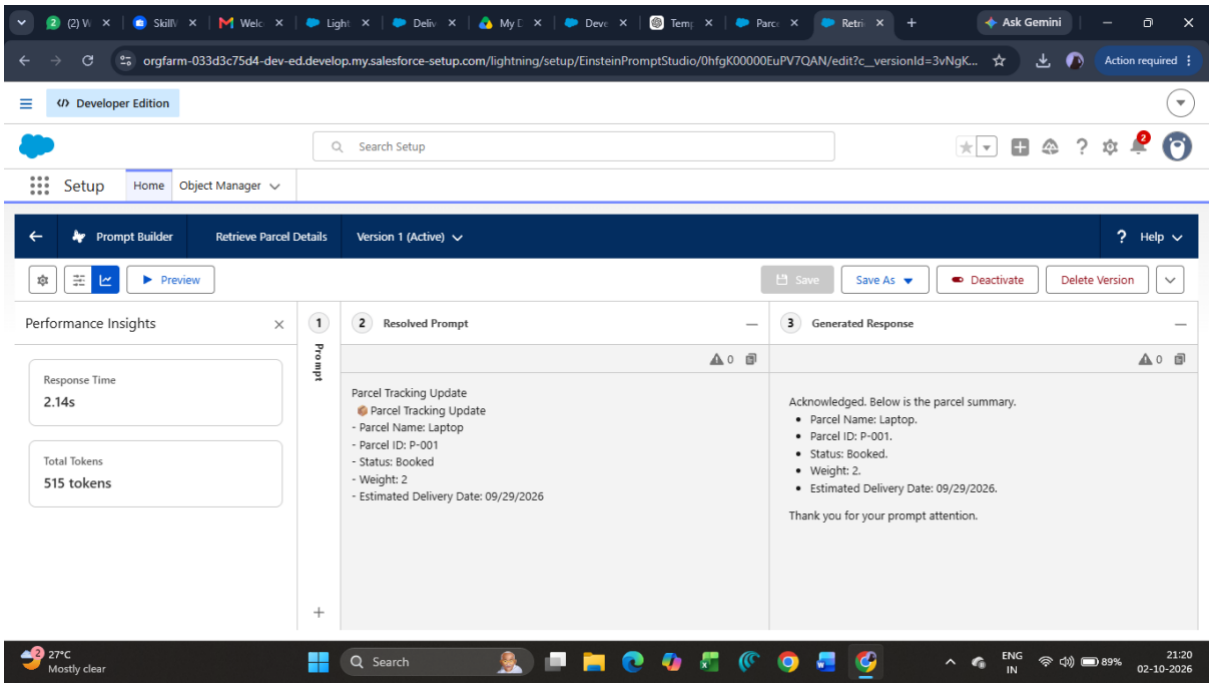

Receiver object:

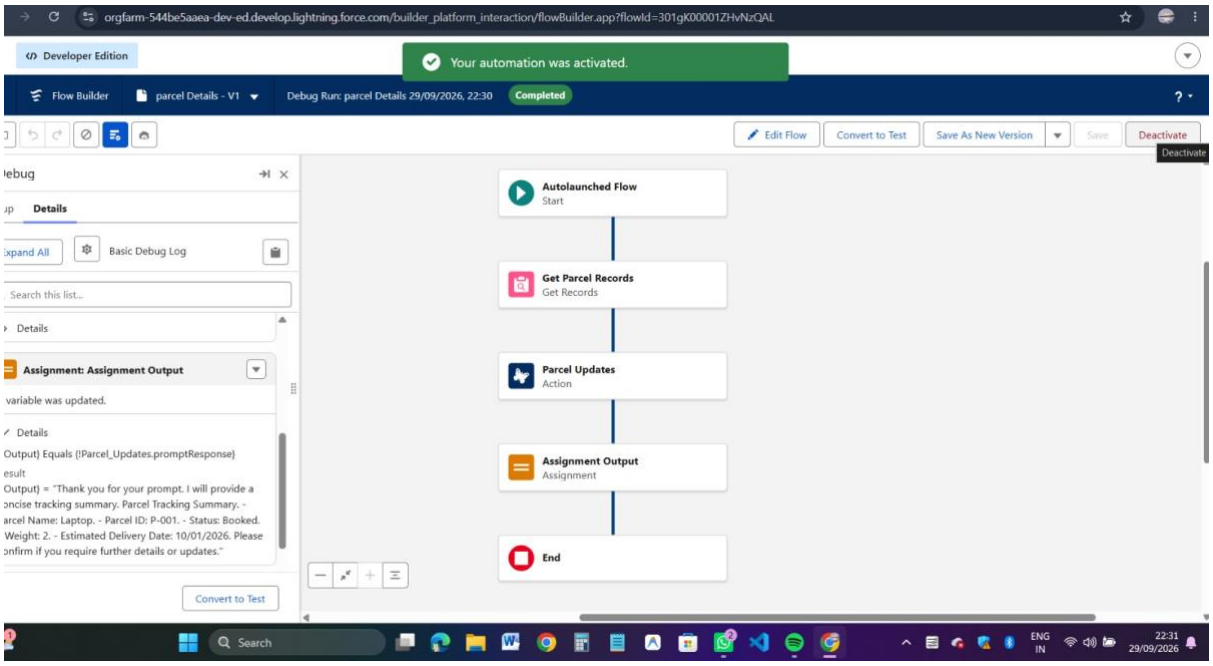

Milestone 5 – Prompt builder

Testing the prompt

Milestone 6 – Flows

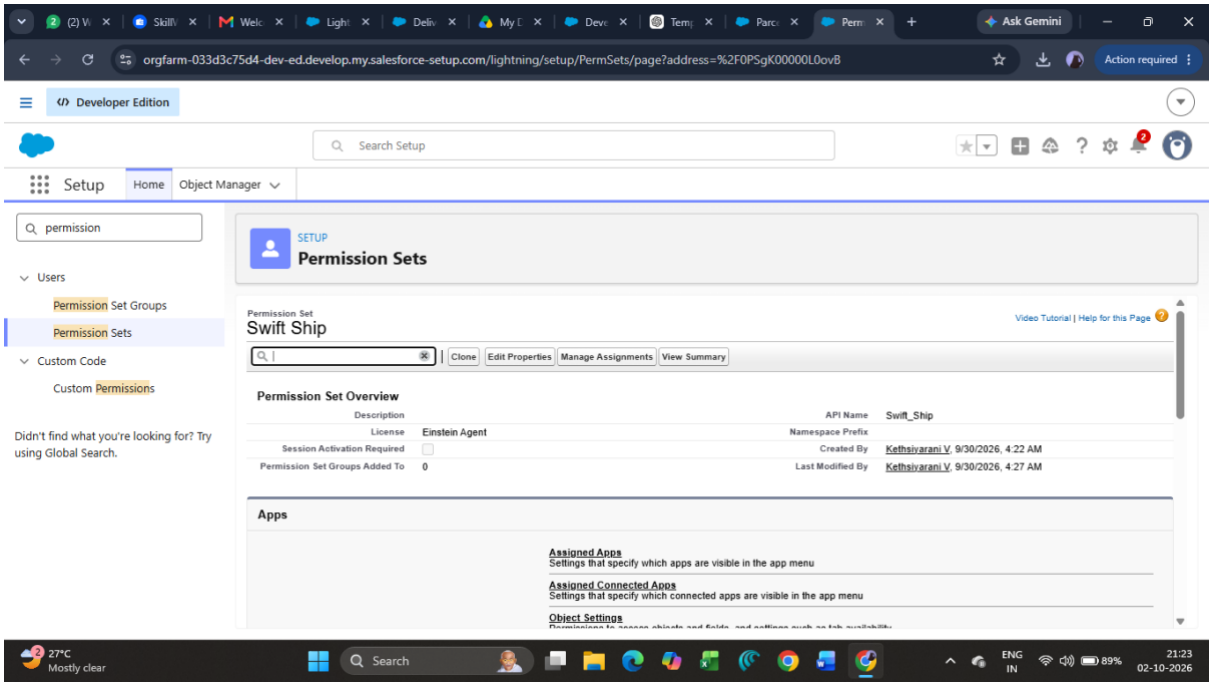

Phase 3 : UI&UX Development & Customization

This phase focuses on configuring the user interface and access permissions required for different users.

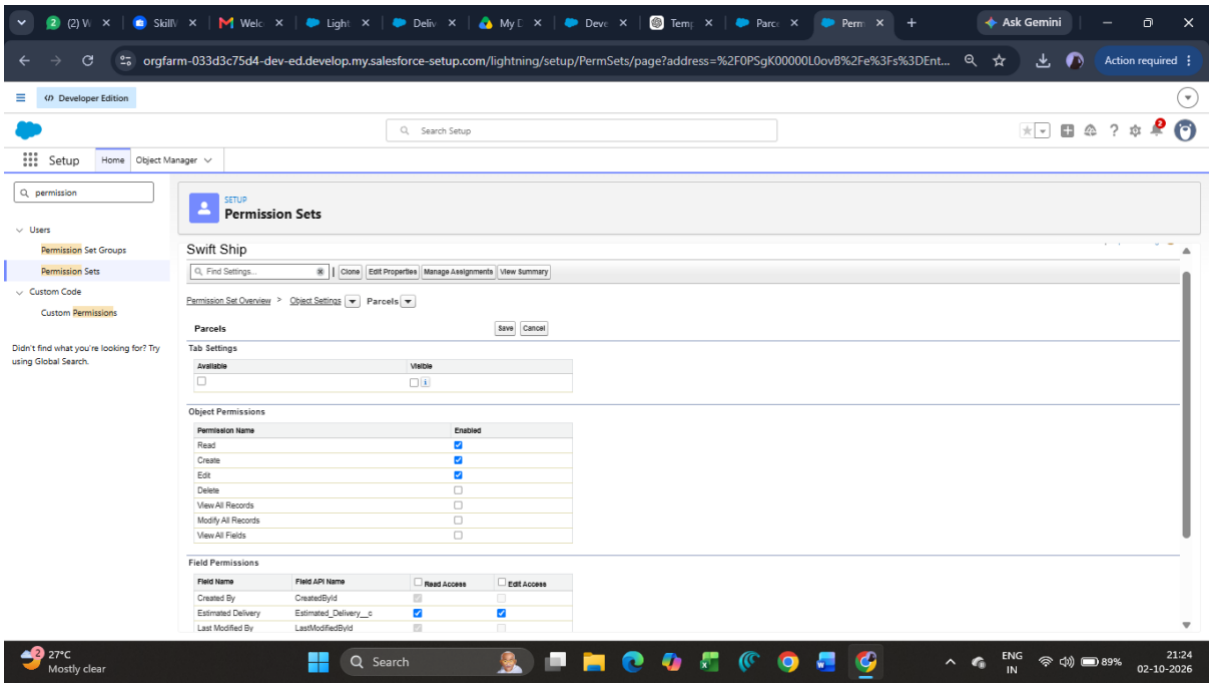

Key Activities

- Configure user access based on user roles.
- Create and assign permission sets.
- Configure permissions for agent users.
- Create and configure the AgentForce AI agent.
- Configure subagents and required actions.
- Activate the required AgentForce configuration.

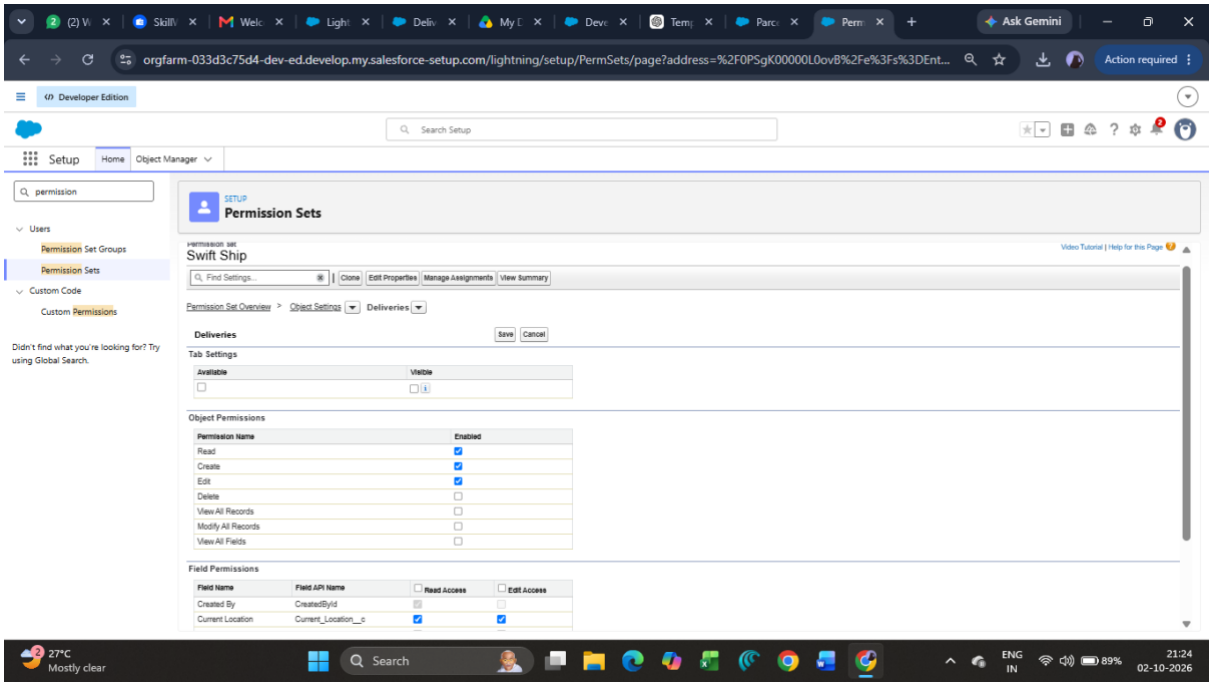

Milestone 1 : Creating Permission Sets

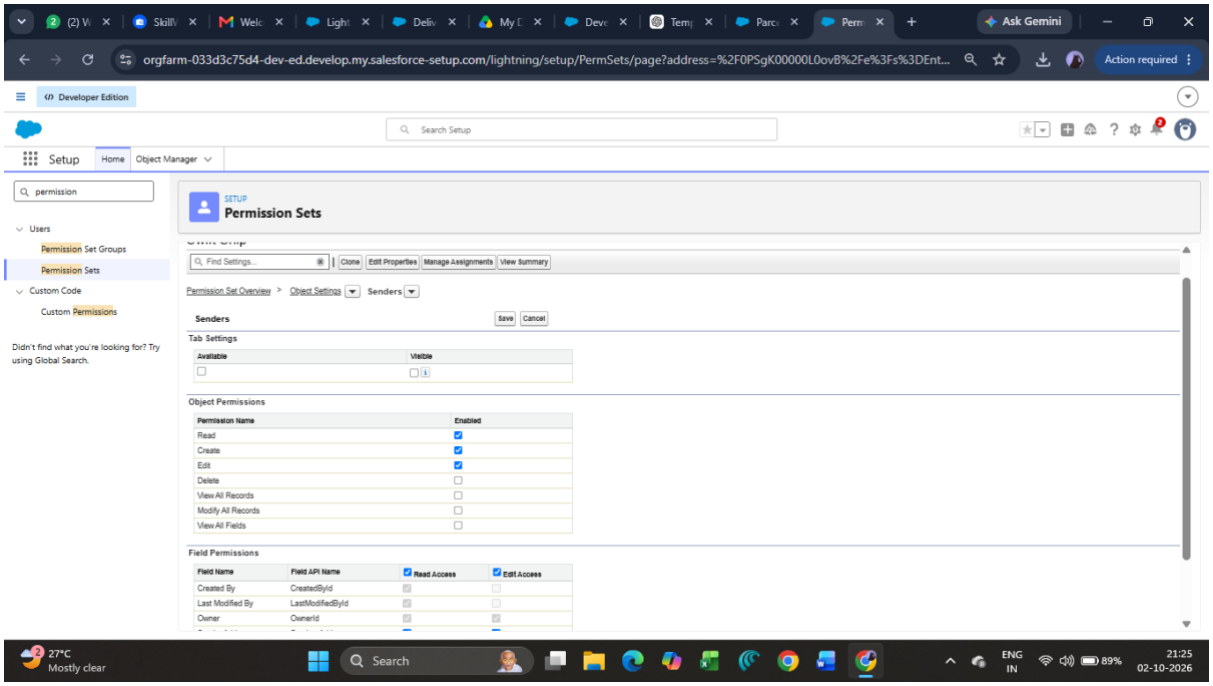

Parcel__c

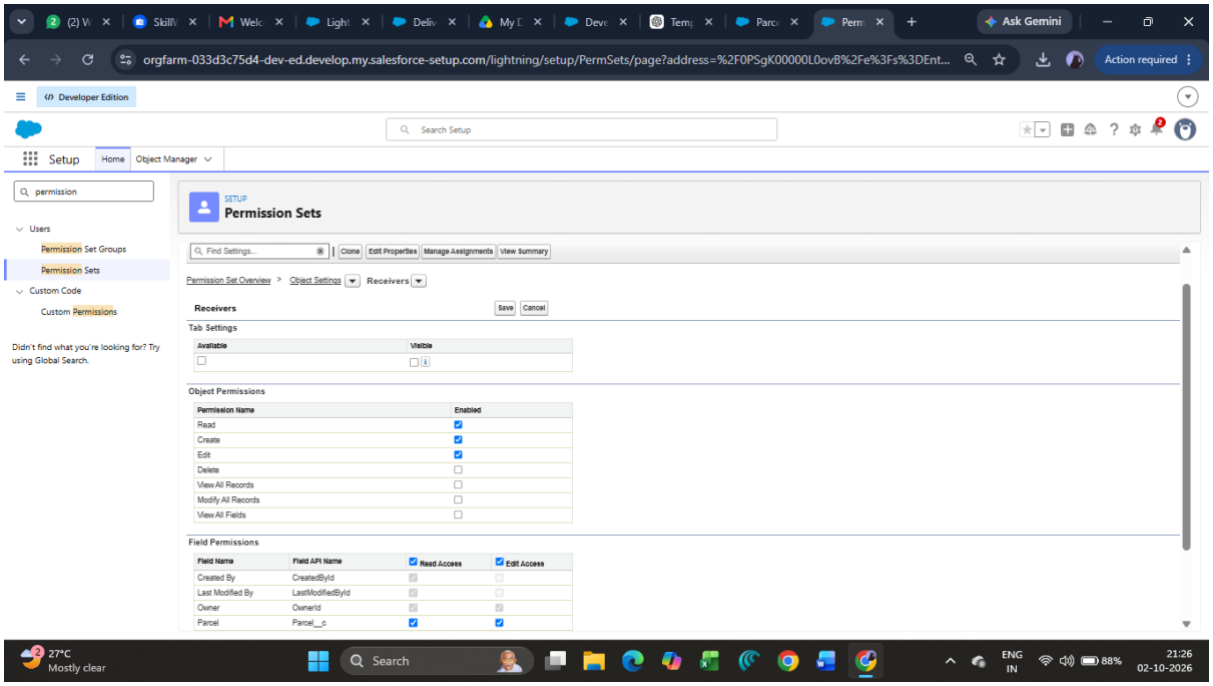

Delivery__c

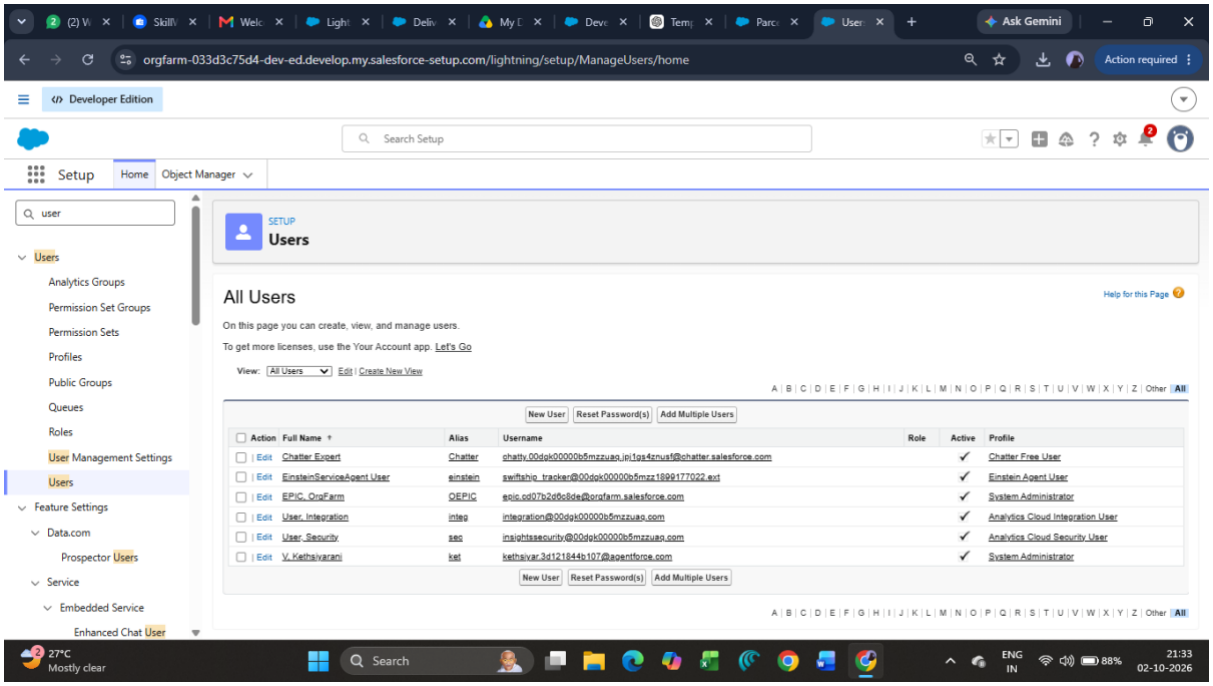

Sender__c

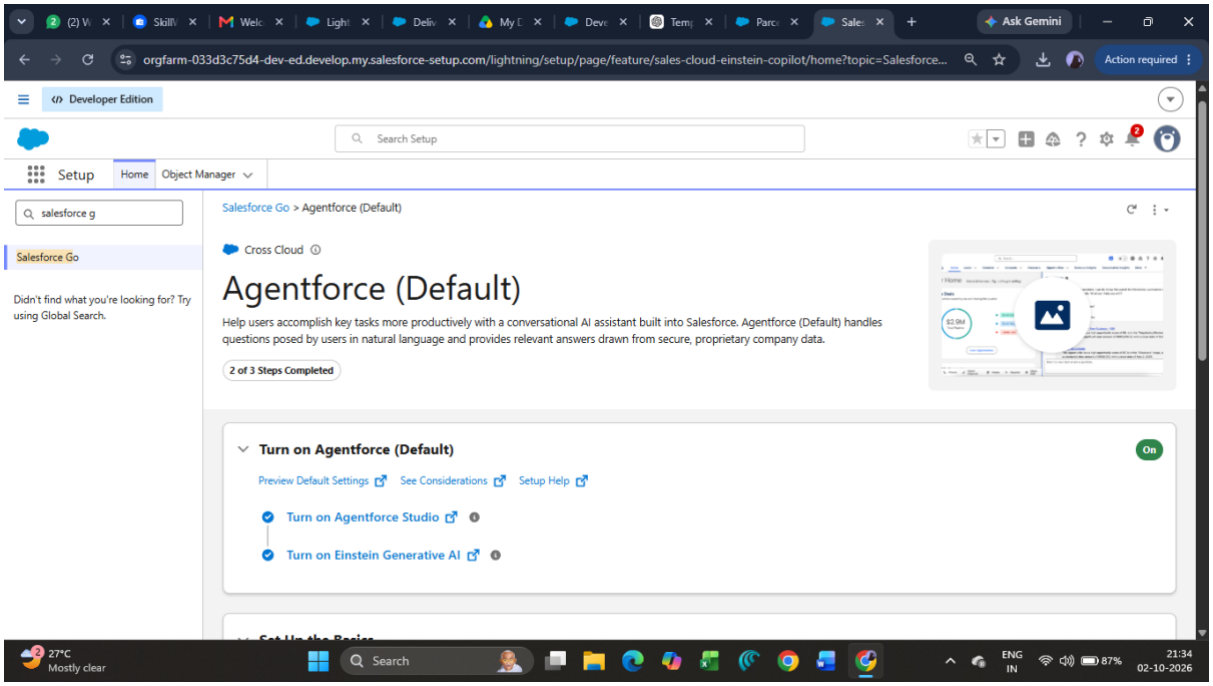

Receiver__c

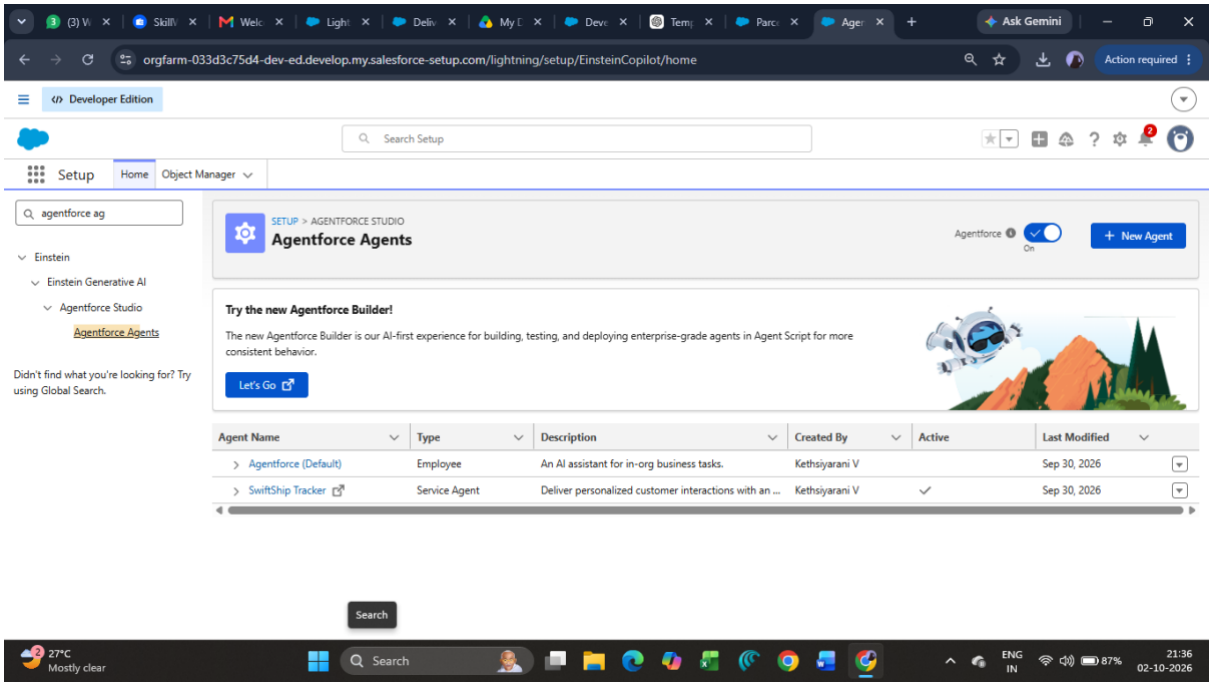

Milestone 2 – Assigning Permissions to Agent user

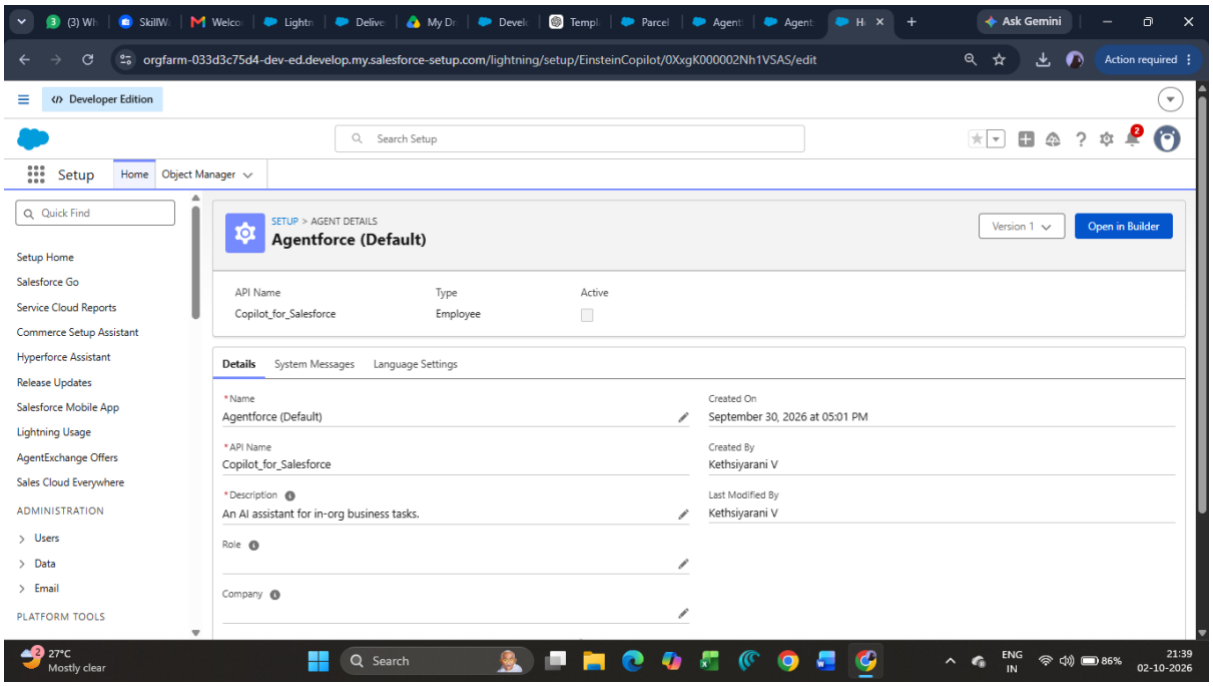

Milestone 3 – Org Setup for AgentForce

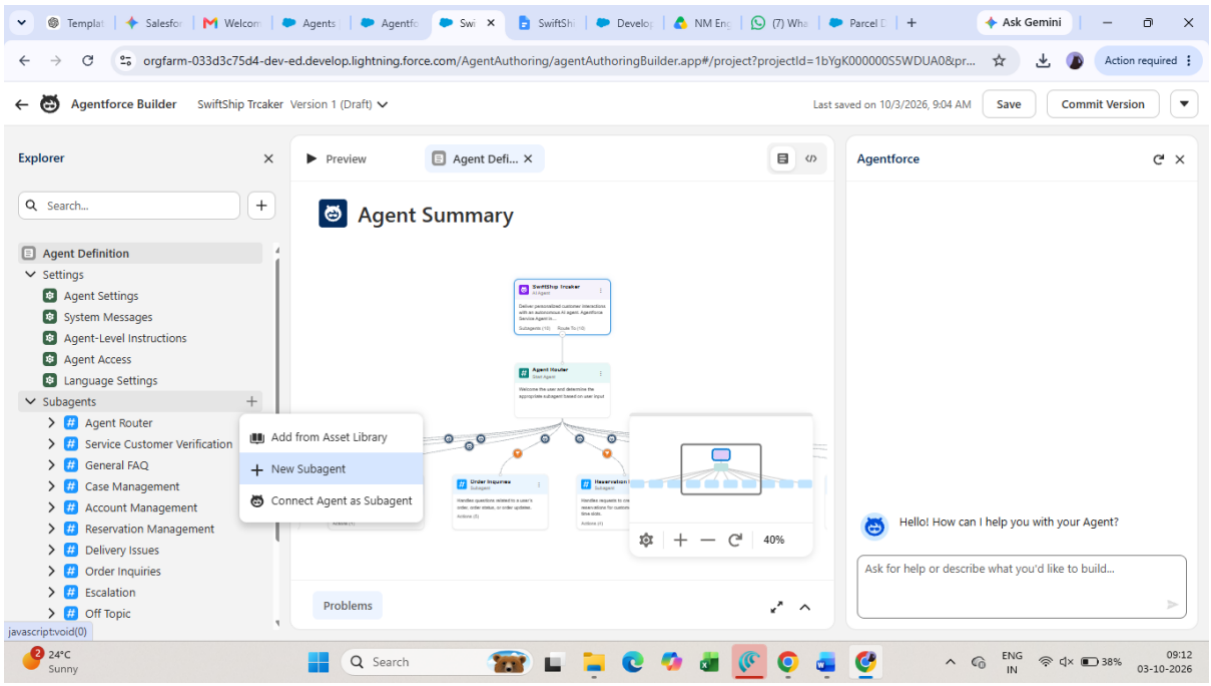

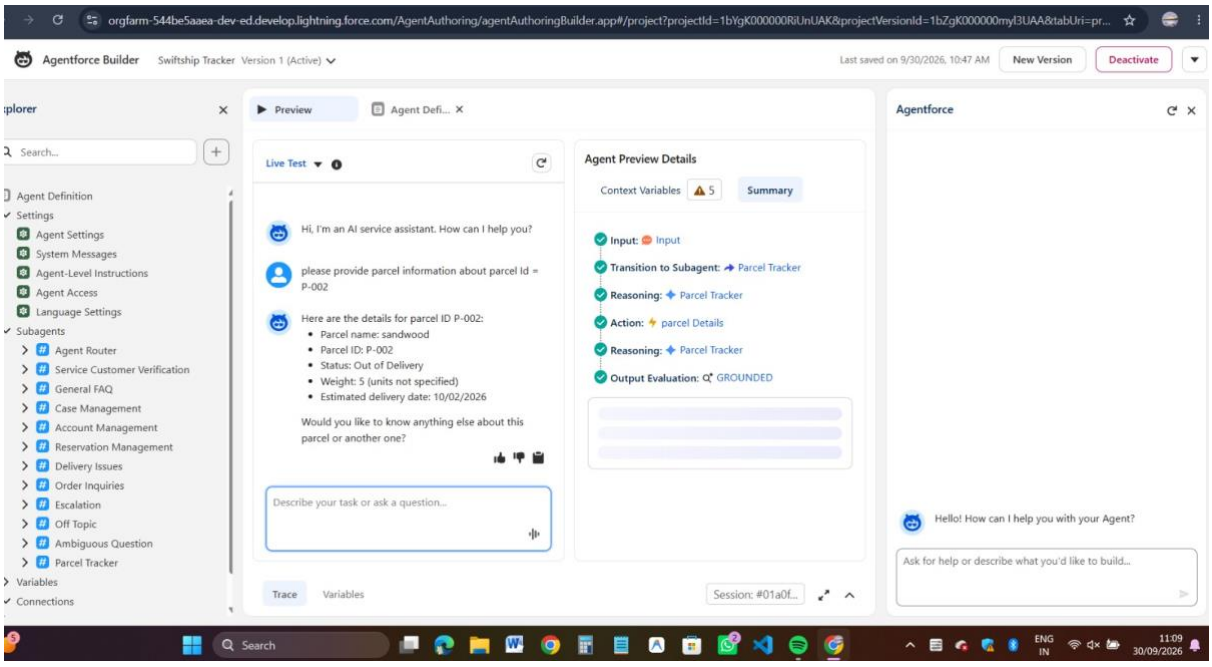

Milestone 4 – Building the Agent

Assign Sub Agents

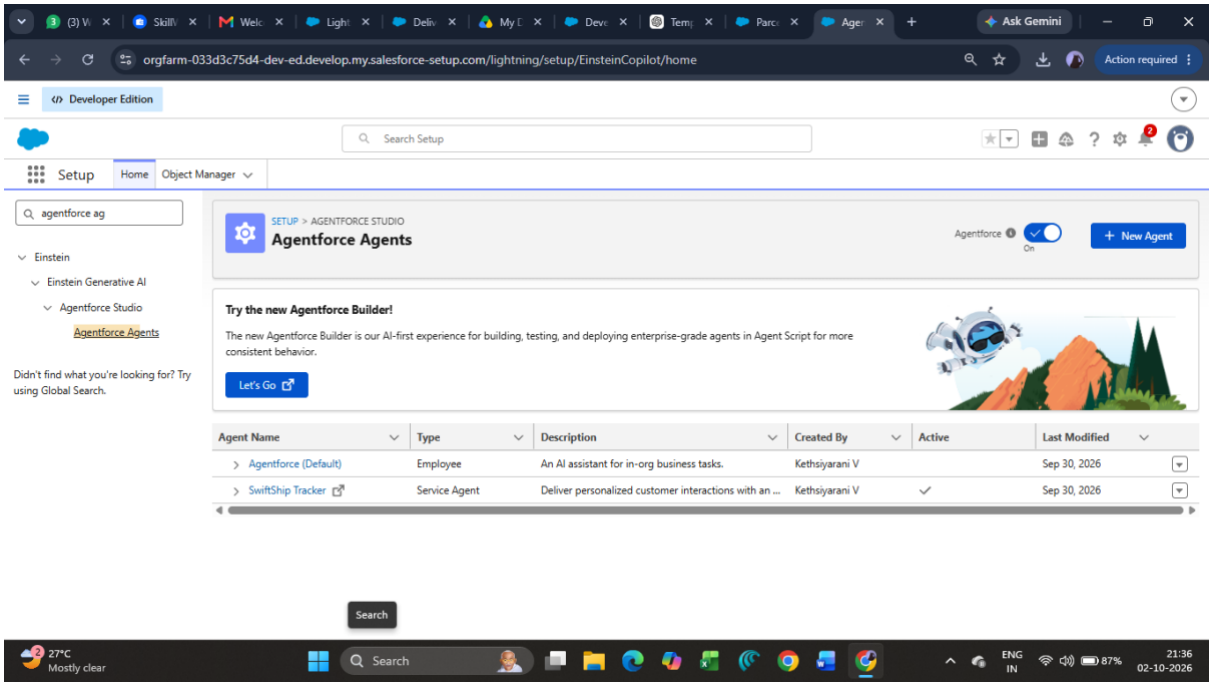

Phase 4: Data Migration, Testing & Security

This phase focuses on validating the configured Salesforce system and checking the functionality of the AgentForce agent.

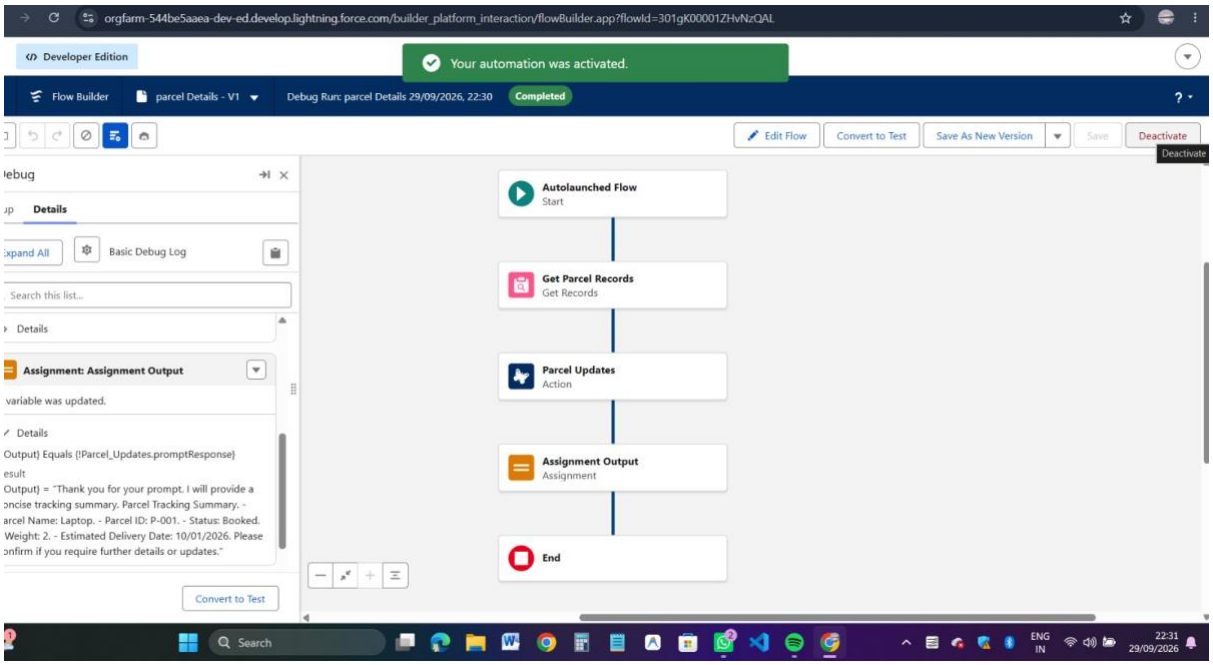

Key Activities

- Verify the configured AgentForce agent.
- Check whether the required topic is assigned correctly.
- Verify the associated Flow.
- Activate the AgentForce agent.
- Verify the required user permissions and security settings.
- Confirm that the system provides the expected tracking information.

Verify Agent

Check the Flow Association

Phase 5: Deployment, Documentation & Maintenance

This phase focuses on validating the completed implementation and preparing the project for future maintenance.

Key Activities:

- Validate the complete implementation in the developer environment.
- Verify the configured Salesforce components.
- Check the working of parcel management and tracking features.
- Review Flows and automation.
- Prepare project documentation.
- Monitor the system for possible issues.
- Perform troubleshooting when required.

- Maintain and update Flows, prompts and configurations when business requirements change.

7. FUNCTIONAL & PERFORMANCE TESTING

The SwiftShip Tracker system was tested to check whether the main features work correctly.

- Parcel creation and status updates were tested.
- Salesforce Flows and automated processes were verified.
- Data retrieval and user permissions were checked.
- Reports and dashboards were verified.

8. ADVANTAGES

- Centralized parcel information.
- Easy parcel tracking.
- Reduces manual work.

DISADVANTAGES

- Requires accurate parcel data.
- Depends on Salesforce configuration.
- AI responses depend on proper prompts and available data.

9. FUTURE SCOPE

The future improvements of the SwiftShip Tracker include:

- Enhance AgentForce AI for more parcel-related queries.
- Improve real-time delivery tracking.
- Expand customer self-service through Experience Cloud.
- Add advanced delivery performance analytics.

10. CONCLUSION

The Swift Ship Tracker provides a centralized Salesforce-based solution for parcel booking and delivery tracking. It uses Salesforce Objects, Flows, Agent Force AI, Prompt Builder, Reports and Dashboards to manage parcel information efficiently. The system helps improve parcel tracking, reduce manual work and provide timely delivery information to customers
